

13. The apparatus of claim 8, wherein the planned use-related information of the wireless dockee device is derived by the wireless dockee device from sources including at least one of user settings and one or more applications or combinations of applications such as a calendar program in the wireless dockee device, social networks available to the wireless dockee device, user activity related information accumulated by the wireless dockee device, such as phone calls recently made or received using the wireless dockee device, or current location determined by a location determining unit in the wireless dockee device, and

wherein the wireless dockee device is programmed to select one or more of the sources or combinations of the sources to generate the planned use-related information.

14. The apparatus of claim 8, wherein the apparatus and the wireless dockee device are integrated.

15. A computer program product comprising computer executable program code recorded on a computer readable, non-transitory storage medium, the computer executable program code, when executed by a computer processor, comprising:

code for receiving, by a wireless docking center device, at least from one or more wireless peripheral devices, capability-related information characterizing at least the one or more wireless peripheral devices;

code for receiving, by the wireless docking center device, from a wireless dockee device, or other capable device, planned use-related information of the wireless dockee device; and

code for analyzing, by the wireless docking center device, the received capability-related information and planned use-related information, and performing an action with respect to one or more wireless peripheral devices capable of performing at least a portion of services required by the planned use-related information of the wireless dockee device, based on the analysis.

16. The computer program product of claim 15, further comprising:

code for providing, by the wireless docking center device, information resulting from the analysis, to at least one of the wireless dockee device for user notification/information of selected ones of the one or more wireless peripheral devices capable of performing services required by the planned use-related information of the wireless dockee device and to the one or more wireless peripheral devices, for automatically performing an action with respect to one or more of the wireless peripheral devices

capable of performing services required by the planned use-related information of the wireless dockee device.

17. The computer program product of claim 15, further comprising:

code for transmitting by the wireless docking center device, a status request to the one or more wireless peripheral devices, based on the planned use-related information of the wireless dockee device; and

code for receiving, by the wireless docking center device, from one or more wireless peripheral devices, in response to the status request, information characterizing the one or more wireless peripheral devices.

18. The computer program product of claim 15, further comprising:

code for receiving, by the wireless docking center device, a request from the wireless dockee device for status of the one or more wireless peripheral devices; and

code for transmitting by the wireless docking center device to the wireless dockee device, information based on the information characterizing the one or more wireless peripheral devices specified in the request.

19. The computer program product of claim 15, wherein the planned use-related information of the wireless dockee device is derived by the wireless dockee device from at least one of user settings and one or more applications or combinations of applications such as a calendar program in the dockee device, social networks or user activity related information.

20. The computer program product of claim 15, wherein the planned use-related information of the wireless dockee device is derived by the wireless dockee device from sources including at least one of user settings and one or more applications or combinations of applications such as a calendar program in the wireless dockee device, social networks available to the wireless dockee device, user activity related information accumulated by the wireless dockee device, such as phone calls recently made or received using the wireless dockee device, or current location determined by a location determining unit in the wireless dockee device, and

wherein the wireless dockee device is programmed to select one or more of the sources or combinations of the sources to generate the planned use-related information.

21. The computer program product of claim 15, wherein the wireless docking center device and the wireless dockee device are integrated.
